The next few decades will see great changes in the way energy is supplied and used. First, people will switch from oil and gas to electricity. Second, there will be an increase in power generation from renewable sources. Third, new infrastructure will be built to manage the electricity supply and demand. Smart Grid technology is still in its infancy, but pilot schemes to promote and test it are already underway. It is likely that the technology will be added in 'layers' starting with 'quick win' methods.
